

NICRA team visits adopted village Budhanpura in District Karnal on February 22, 2021

In this adopted village, the work will be emphasized on different aspects of dairy farming and productivity of animals. All growing animals will be supported by providing dewormers as per the schedule and mineral mixture according to their requirements. The farmers will be educated regarding the livestock management by giving them technical support and scientific inputs. The NICRA team will visit the farmers of adopted village on regular basis by deputing well trained staff to the village. The data on different aspects of dairy production and milk productivity will be recorded before initiating the trials with technical inputs. Under SC-SP component the floor rubber mats were distributed among the dairy farmers who are keeping lactating animals. These floor rubber mats will provide soft surface to sitting and standing animals. These mats may be helpful in reducing injuries and preventing many diseases, pathogenic conditions caused by dirty surface borne pathogens. The effect of these mats on animal health and productivity will be studied with other parameters.
